

Configuring SMTP Server to work with infoRouter

Right mouse click on the **My Computer** icon and select **“Manage”** menu to launch the Management Console

In the Management Console, Navigate to the “**Default SMTP Virtual Server**” node and right mouse click on it. Select the **Properties** menu.

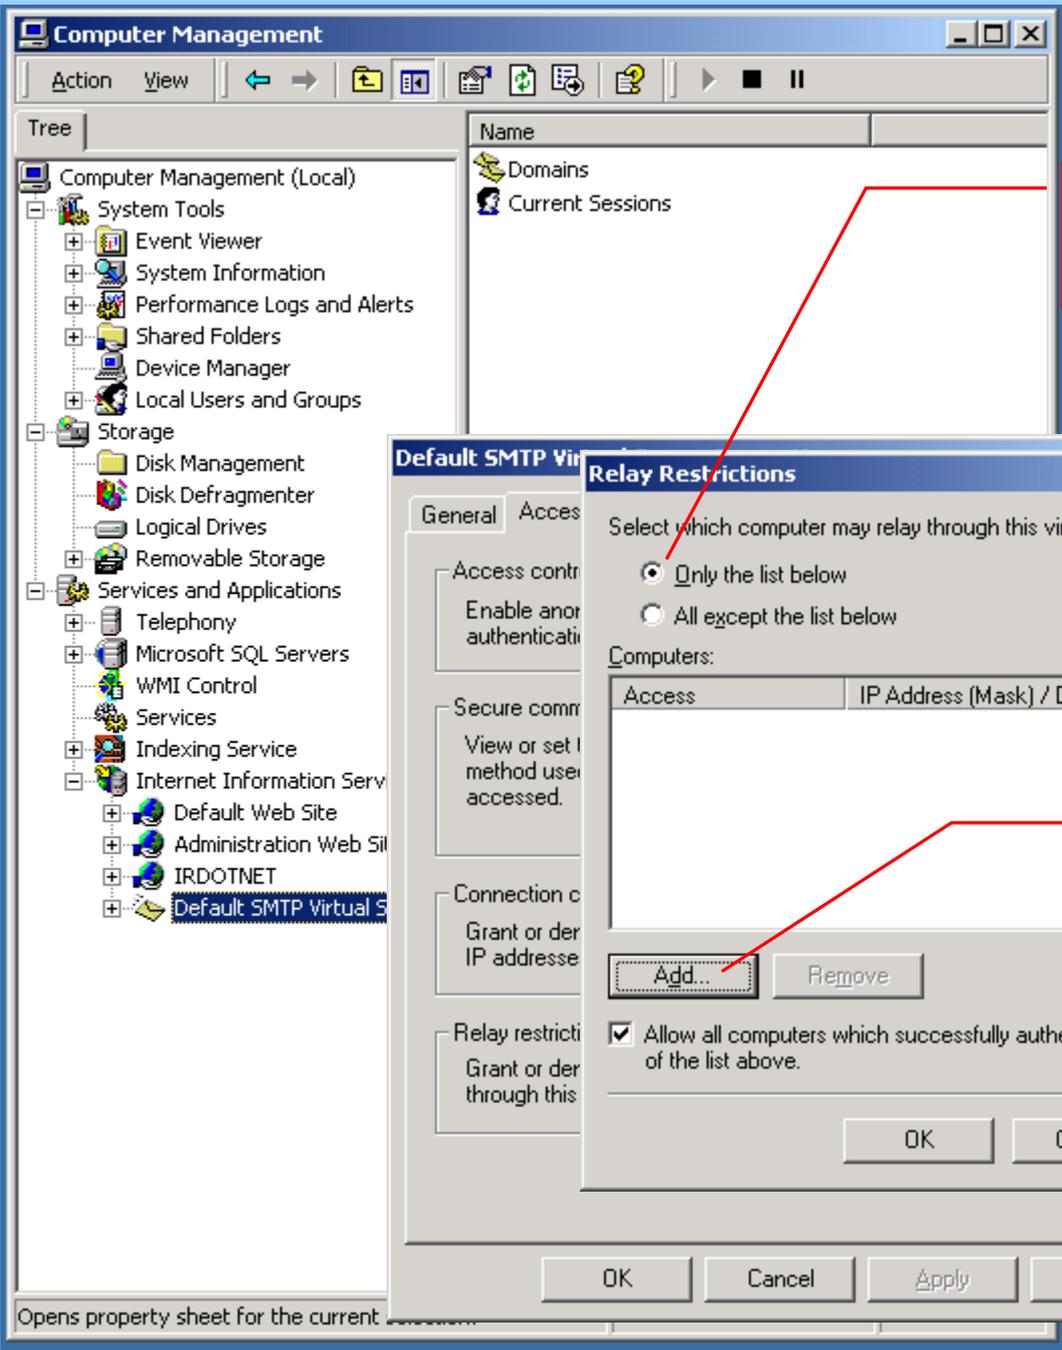

1

Switch to the **Access** tab.

2

Click on the **Relay** button to edit Relay Restrictions.

1

Make sure "Only the list below" option is selected.

2

Click on the **Add** button.

Opens property sheet for the current

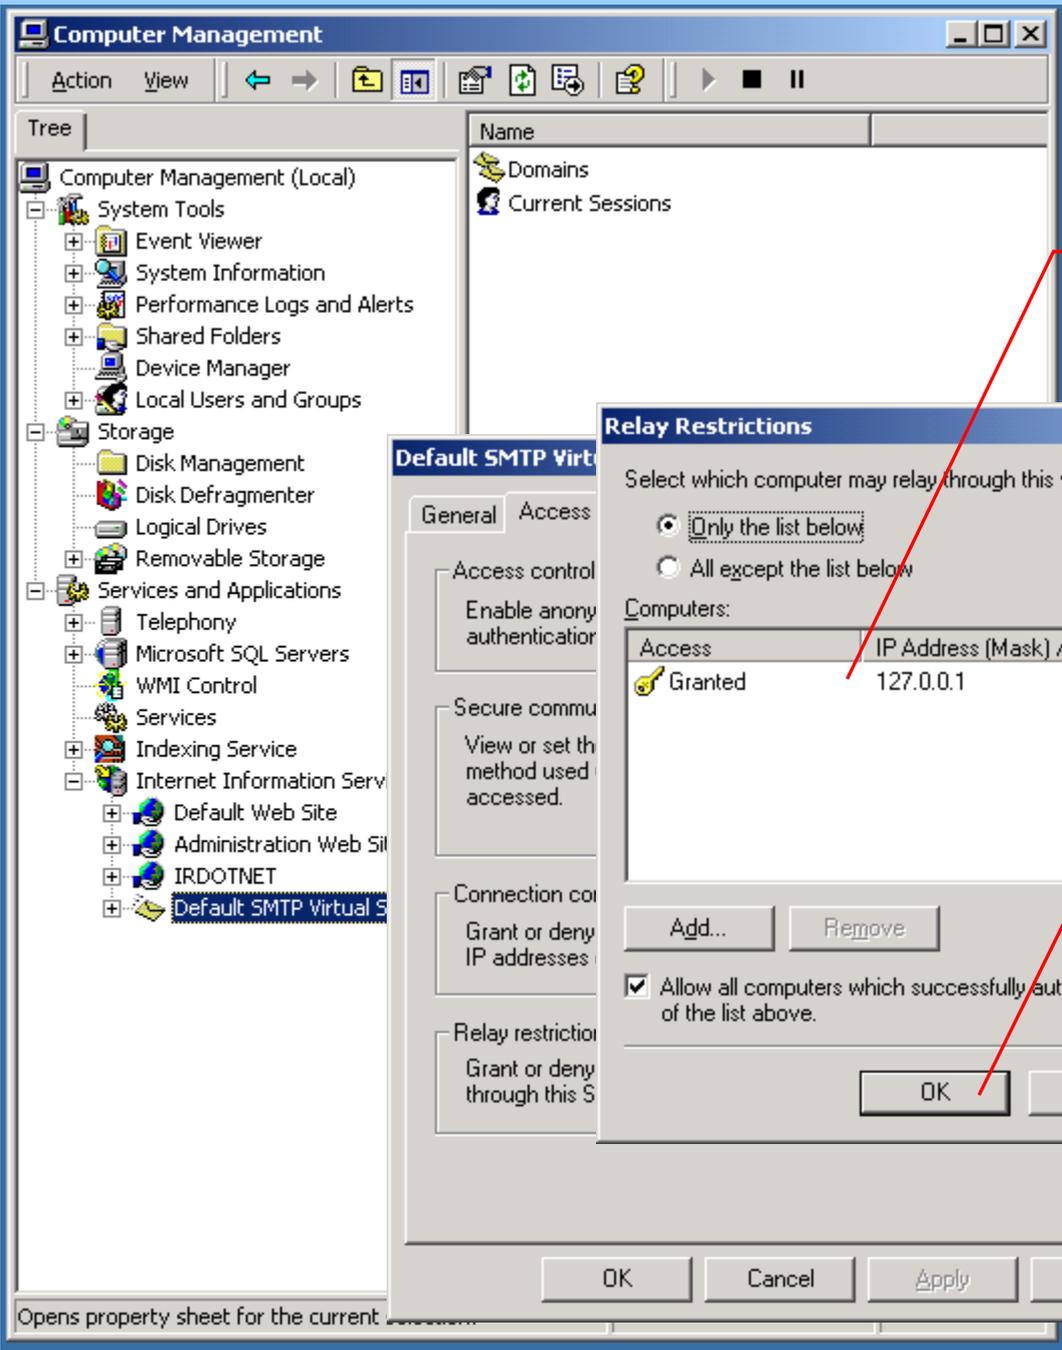

1 Select **Single Computer** option

2

Type **127.0.0.1** as the IP Address. This IP is reserved by **Local host**. Or You may use "DNS Lookup" to resolve Local host's IP address.

3

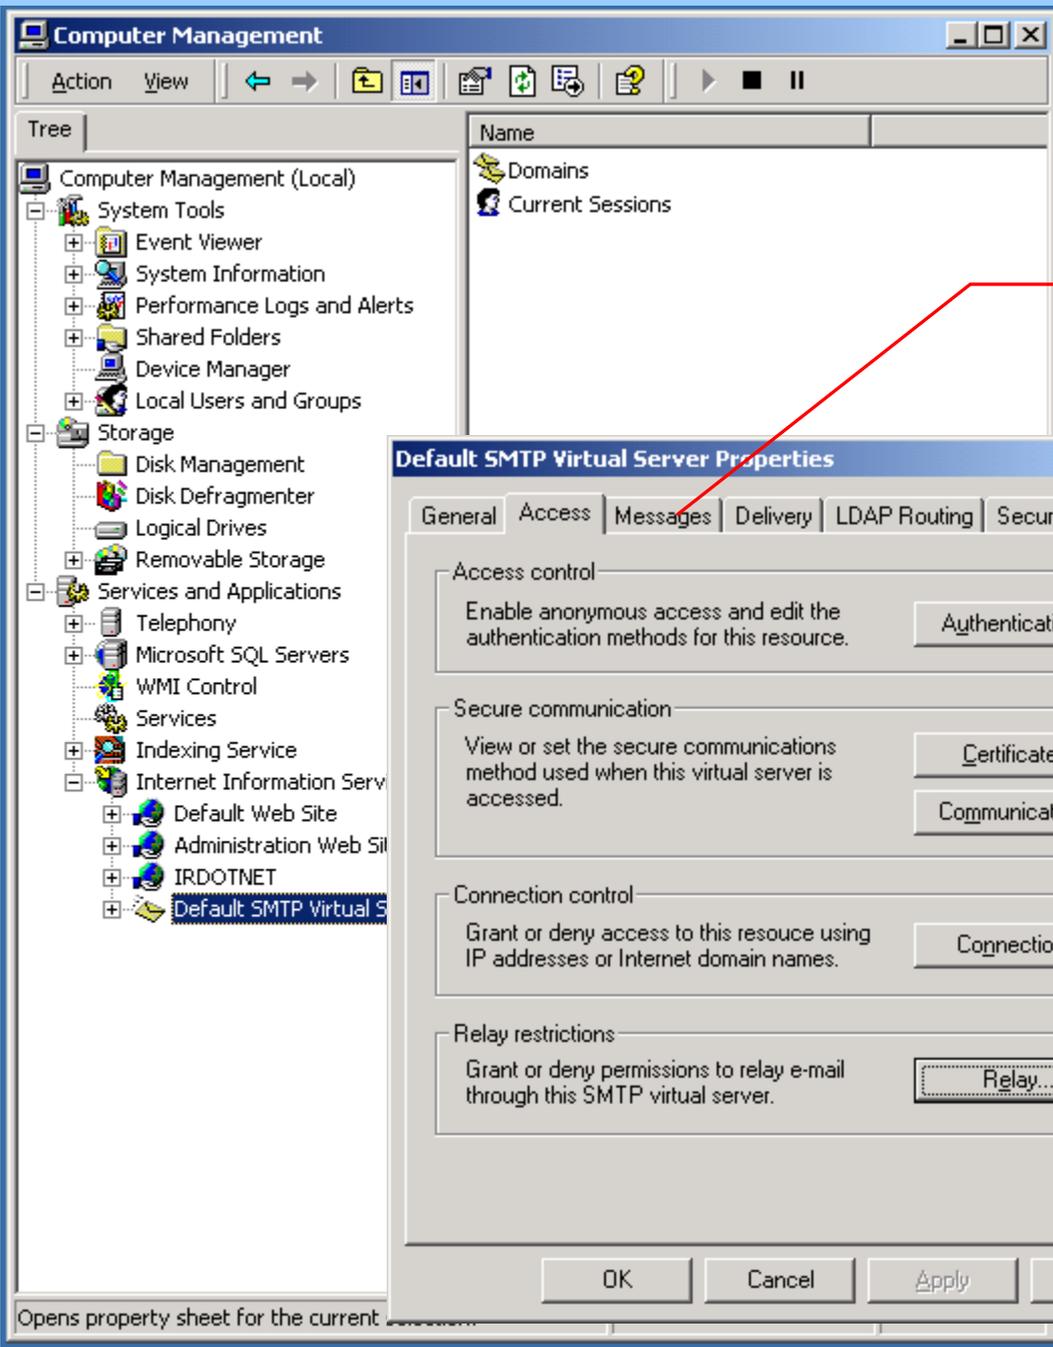

Click **OK**.

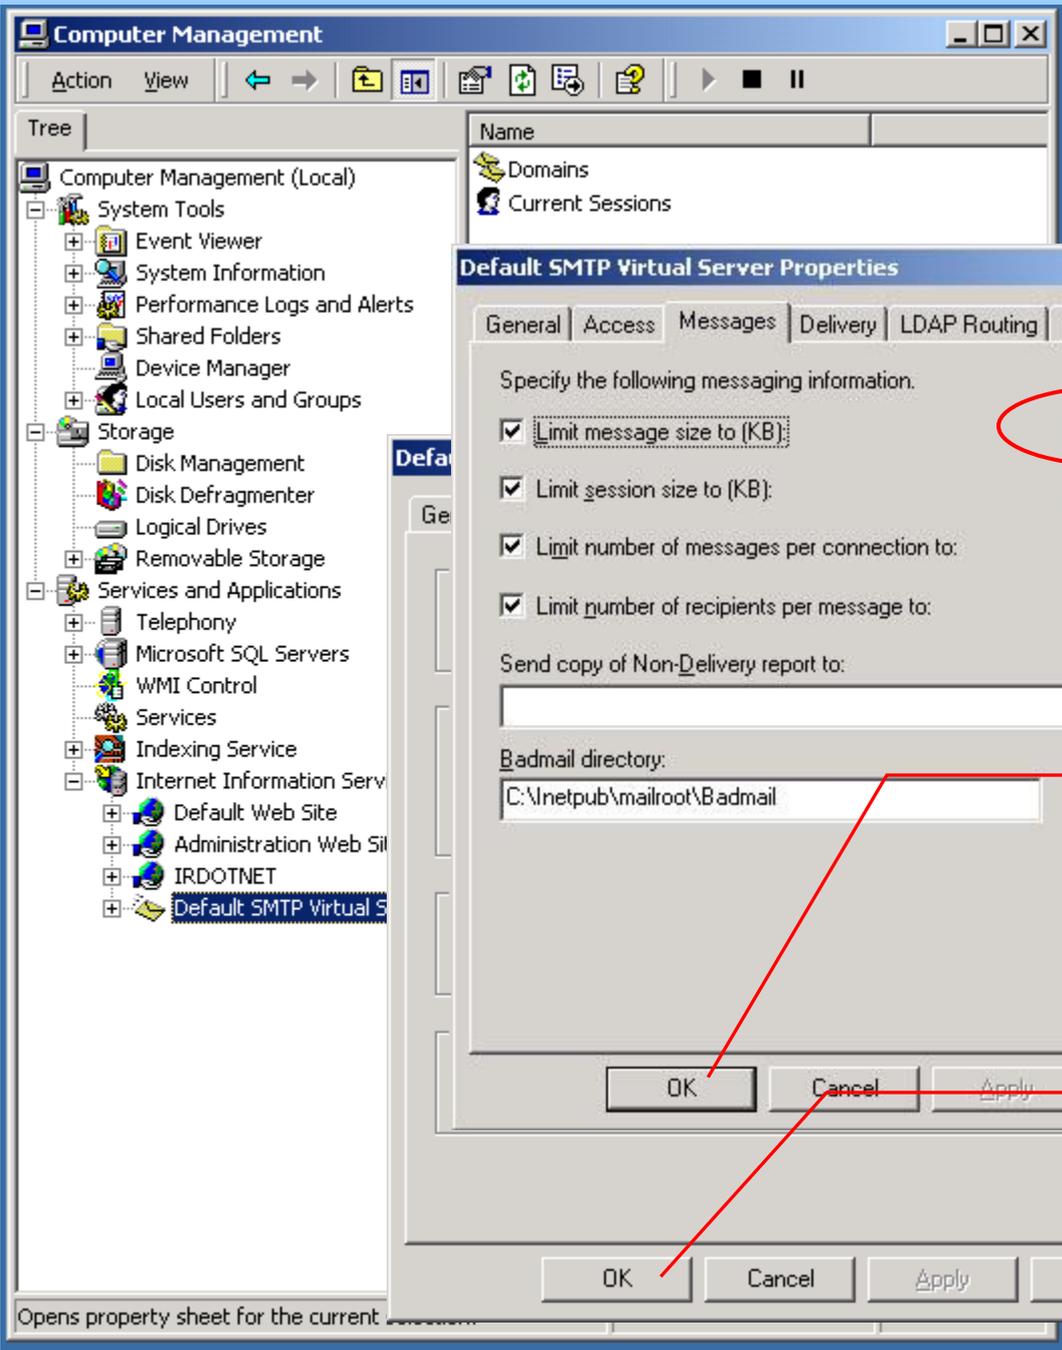

The **Local host** is now granted rights to relay messages.

1

Click **OK**.

Now click on the Messages Tab

1

Make sure that this setting is larger than the "Attachment Size Limit" parameter in the "infoRouter Application Settings".

2

Click **OK** to Apply changes.

3

Click **OK** to Save SMTP Settings.
