

What's New in infoRouter Version 7.5

Release Notes
August 05, 2007

Highlights of New & Improved features in Version 7.5

New Platform Requirement .NET framework 2.0

New and Improved User Interface

- Paging support to documents
- Filtering documents while paging

Microsoft Office Integration

- MS Word
- MS Excel
- MS Outlook
- MS PowerPoint

HTML Document Type

Email Storage and Archiving

Records Management and Compliance Improvements

Additional Audit Logs & Reports

- Centralized Audit Reporting
- Security Auditing

New Stand-Alone Modules

- Email Scanner
- LDAP Synchronization manager
- LDAP Authentication Module
- infoRouter Scan Station
- infoRouter Hot Folders
- Convert HTML to PDF Service

Web Services API Enhancements,

- Nearly double the number of methods and functions as compared to the previous version
- W3.org standardization to support different development platforms (Java)

Document Object Enhancements,

- Per version OCR text attribute
- Major Minor Revision Support
- Historical Read Log
- Document Type

Performance and Maintenance

- Faster search results
- Folder tree optimizations
- Better garbage collection
- Startup parameters moved to XML configuration files for easier administration.

Language Enhancements

- French
- Turkish and Far East versions will be added

Security

- Password re-prompting policy for critical actions
- New options with login tracking

Send to (email)

- Multiple document and folder attachments

Installer

- Simplified. Reduced manual steps
- Starter package with MYSQL

New & Improved Features by section:

.NET FRAMEWORK 2.0 REQUIREMENT

Version 7.5 now requires .NET Framework 2.0 in order to take advantage of new and improved classes offered by this platform. Please make sure that you have installed the new framework before attempting an upgrade to or install this new version.

NEW AND IMPROVED USER INTERFACE

Navigational Improvements.

Navigation of high volume folders and documents.

The documents pane now works with paging

The documents pane now allows for filtering to allow for faster access to documents in crowded folders.

MICROSOFT OFFICE INTEGRATION

Version 7.5 now offers full Microsoft Office integration. The new feature supports MS Office versions 2000 through 2007 for desktop applications such as MS Outlook, MS Word, MS Excel and MS PowerPoint.

HTML DOCUMENT TYPE

Version 7.5 now features a new tool to create rich HTML documents directly from within infoRouter.

CONVERSION TO PDF SERVICE

Version 7.5 now supports the conversion of HTML documents to PDF.

EMAIL STORAGE AND ARCHIVING

Version 7.5 now supports the storage and archival of emails. With the tight integration to MS Outlook, emails can now be directly pushed into infoRouter. Email documents and their attachments are indexed as normal documents making their search and management extremely easy.

SECURITY ENHANCEMENTS

Assignment of security can now be logged to provide better accountabilities. Every security change can be tracked by to the person performing the change.

RECORDS MANAGEMENT & COMPLIANCE IMPROVEMENTS

New and improved folder rules provide the better definition of Retention Rules.

NEW STAND ALONE MODULES

Version 7.5 now offers the following new stand-alone modules.

EMAIL SCANNER

Email Scanner is a new tool that is capable of scanning (listening) to POP3 accounts. The emails sent to these accounts can be automatically sent to an infoRouter folder making the emails available to authorized individuals.

LDAP SYNCHRONIZATION MANAGER

LDAP Synchronization Manager is a tool that can be configured to automatically synchronize LDAP user groups to infoRouter.

LDAP AUTHENTICATION SERVICE

LDAP Authentication Service is a tool that can be installed on any machine (preferably a PDC or a BDC) to provide authentication services for non-infoRouter authenticated accounts. infoRouter users can now be authentication against multiple domains removing the previous restrictions of one LDAP domain.

INFOROUTER SCAN STATION

This new tool allows multiple users to process scanned documents and send them to infoRouter folders.

An automatic TIFF to PDF feature is also offered. Users can also enter multiple custom properties (META) to make the search of scanned documents very easy.

INFOROUTER HOT FOLDERS

This new tool runs as a service on any machine to scan (watch) file system folders such as incoming faxes, scanned documents, electronically generated documents etc. and send these documents to infoRouter folders.

CONVERT HTML TO PDF SERVICE

This new tool runs as a service on any machine to wait for infoRouter conversion requests. It accepts HTML documents and converts these documents to PDF.

WEB SERVICES API ENHANCEMENTS ,

This new version introduces nearly double the number of methods and functions as compared to the previous version. We also changed the structure of the web services API to support different development platforms such as Java based on the W3.org guidelines.

DOCUMENT OBJECT ENHANCEMENTS ,

New fields such as AUTHOR (original author), Document Language and Document source can now be tracked natively and can be used in search as criteria to reduce search results.

Each version of a document (scanned images) can now be assigned an OCR text attribute.

Version control on documents have been improved significantly by the introduction of support for Major, Minor, and Revision functionality.

The new "Document Type" feature allows the definition of document types. When a document type is assigned to a document, the document type will automatically prompt the user to fill out additional Meta Data as required by the document type definition. This new feature significantly improves document Meta quality for faster searching and retrieval of documents.

PERFORMANCE AND MAINTENANCE

The new document management platform under the hood introduces hundreds of improvements and efficiencies to allow for faster performance in nearly every functional area of infoRouter.

The performance enhancements result in the following:

- Faster search results
- Folder tree optimizations
- Better garbage collection
- Startup parameters moved to XML configuration files for easier administration.

LANGUAGE ENHANCEMENTS

- French
- Turkish and Far East versions will be added
- Double-byte character support

SECURITY

- Password re-prompting policy for critical actions
- New options with login tracking

SEND TO (EMAIL)

- Multiple document and folder attachments

INSTALLER

- Simplified. Reduced manual steps
- Starter package with MYSQL
