

infoRouter Version 8.0 Prerequisites for Installation on MS Windows 7

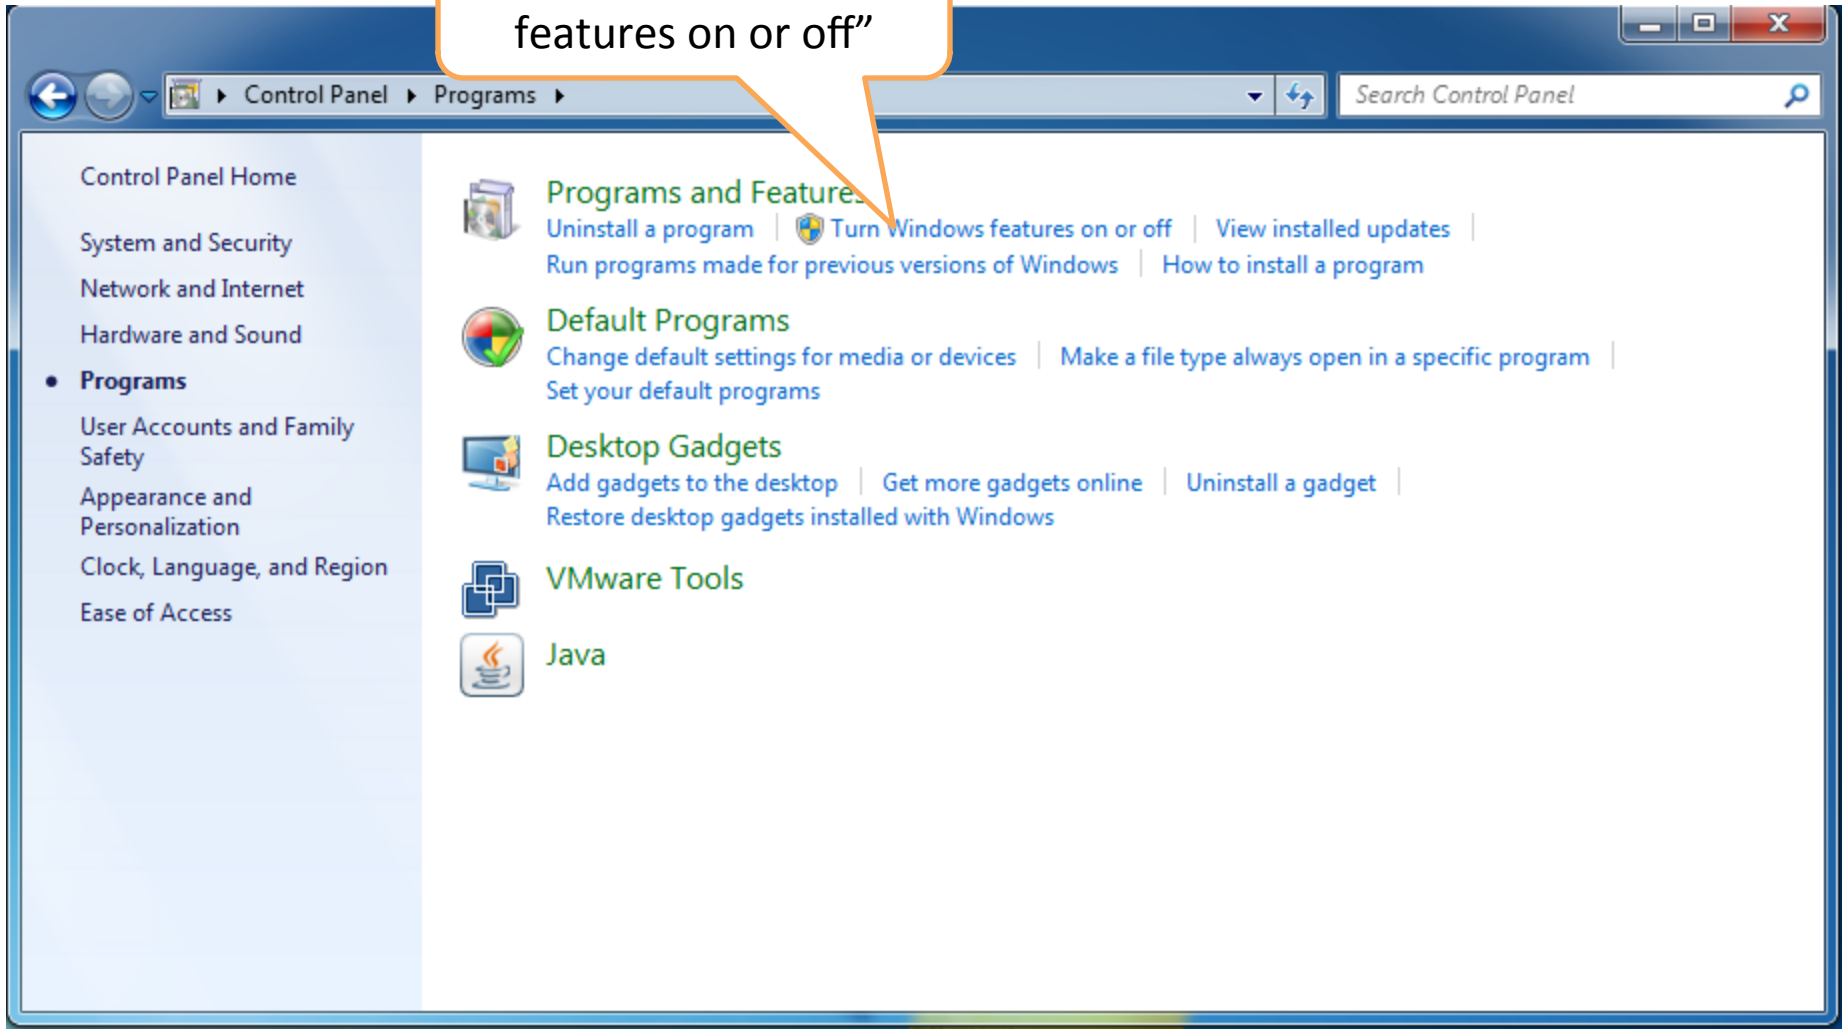

(For trial purposes only. Windows 7 is not a supported platform for production environments.)

Navigate to the Control Panel

Turn Windows features on or off

Click "Turn Windows features on or off"

Install all Required Services

Check "Indexing Service"

Check Web Management Tools and all items underneath

Check "World Wide Web Services"

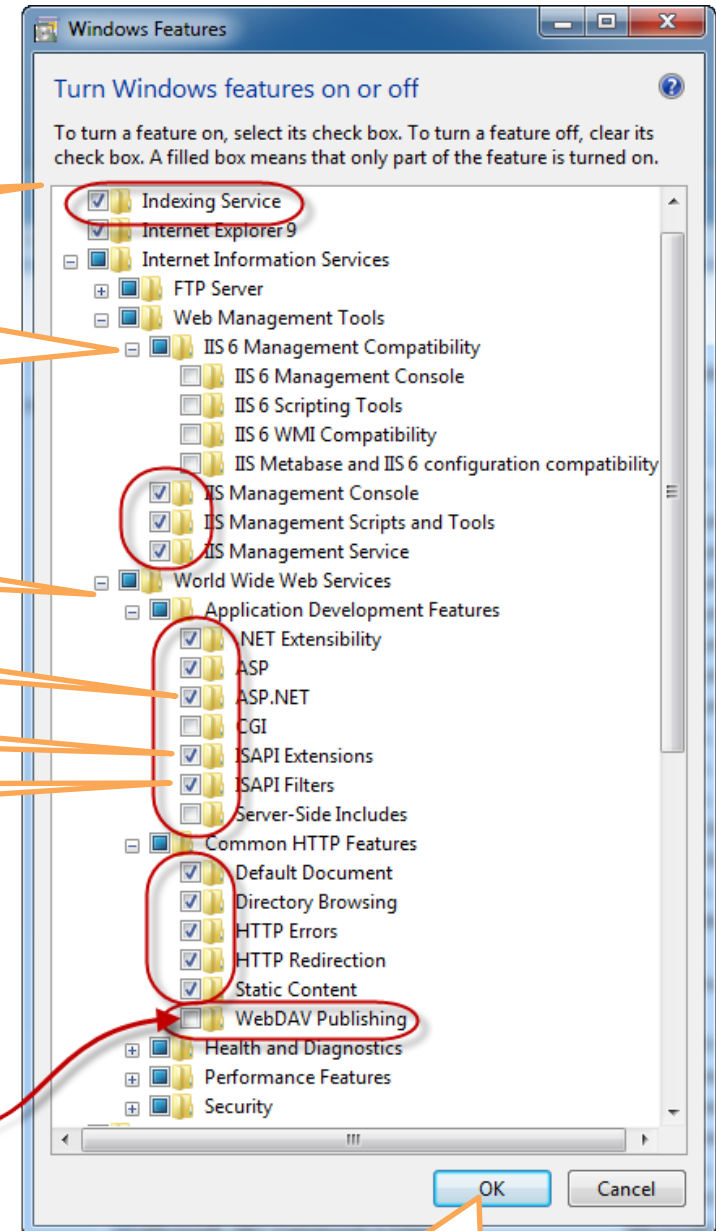

Check "ASP.NET"

Check "ISAPI Extentions"

Check "ISAPI Filters"

All marked services must be checked for infoRouter to function correctly on this platform

Make sure that WebDAV Publishing is unchecked

Click "OK" Button.
